

Chapter 3 Project - HTML

You typically have favorite dishes from a variety of different restaurants. What if you could open a restaurant that served all of your favorite dishes, from the special shrimp lo mein from the Chinese restaurant down the street, to your grandma's home-cooked lasagna. For this assignment, you'll start building a website for your restaurant, <YourName>'s Food Fusion.

Tip: Usually when you see <> angle brackets in instructions or code samples, it means replace this, **including the angle brackets**, with your own information.

Tip: Follow the directions closely, and pay attention to the letter case. For example, if you are to create a page called index.html, then a page called Index.html would **not** be correct.

There will be several HTML pages in this assignment: index.html, about.html, breakfast.html, lunch.html, dinner.html, extras.html, locations.html, contact.html, survey.html, events.html, employment.html and order.html.

Step 1.

Create the following HTML pages. Example directory structure naming: csci120/chapter3/project/ (All images should be stored in an images folder: Example: csci120/chapter3/project/images

- index.html, titled "<YourName>'s Food Fusion, with
 - head section, with title element that is appropriate for your webpage
 - the restaurant header, including at least a name and a logo
 - the navigation menu bar, including links to each of the html pages in the assignment, including the current index page (except survey.html and employment.html, which will be in the footer)
 - a welcome section in the middle that should include at least 3 divisions (div), each div will include 1 image, 2 paragraphs of text, and 1 hyperlink
 - the footer bar, including a copyright symbol (use a character entity) and links to survey.html and employment.html
- **ALL PAGES should include the same head section, the restaurant header, navigation menu bar at the top, and footer bar at the bottom**
 - **Tip: Perfect these sections in the index.html page, and then just copy them to start each of the other pages. Add the page-specific content on each page between the navigation header bar and footer bar.**

Step 2.

Once index.html is complete, and you've read through the details in Step 1, create the rest of the pages with the basic html structure and the listed requirements. Don't forget to include the similar head, header, navigation, and footer sections on each page.

- about.html, should be titled "About Us", with
 - at least 1 image
 - at least 2 paragraphs

- breakfast.html, should be titled “Breakfast”, with
 - at least 2 dishes, each dish should be in its own div, each div should contain
 - a <hX> tag for the dish title, where X is a number 1-6
 - a paragraph description
 - an image
 - a price
 - a “more details” summary tag that expands to show a list of potential allergen details (eggs, nuts, etc..)
- **Tip: Learn about the summary/details tags here:**

https://www.w3schools.com/tags/tag_summary.asp
- lunch.html, should be titled “Lunch”, with
 - at least 2 dishes, each dish should be in its own div, each div should contain
 - a <hX> tag for the dish title, where X is a number 1-6
 - a paragraph description
 - an image
 - a price
 - a “more details” summary tag that expands to show a list of potential allergen details (eggs, nuts, etc..)
- dinner.html, should be titled “Dinner”, with
 - at least 2 dishes, each dish should be in its own div, each div should contain
 - a <hX> tag for the dish title, where X is a number 1-6
 - a paragraph description
 - an image
 - a price
 - a “more details” summary tag that expands to show a list of potential allergen details (eggs, nuts, etc..)
- extras.html, should be titled “Appetizers and Extras”, with
 - at least 2 dishes, each dish should be in its own div, each div should contain
 - a <hX> tag for the dish title, where X is a number 1-6
 - a paragraph description
 - an image
 - a price
 - a “more details” summary tag that expands to show a list of potential allergen details (eggs, nuts, etc..)
- locations.html, should be titled “Locations”, with
 - a list (use a list) of addresses and phone numbers for your restaurant locations (at least 2)
- contact.html, should be titled “Contact Us”, with
 - a paragraph stating “This page coming soon”
- survey.html, should be titled “Help us serve you better”, with
 - a paragraph stating “This page coming soon”
- events.html, should be titled “Special Events”, with

- several paragraphs (at least 3) describing special upcoming events at your restaurant
 - each paragraph should include 1 image
- employment.html, should be titled “Job Opportunities”, with
 - several paragraphs (at least 2) each describing a job position
 - use heading tags (h1-h6) for the job titles
- order.html, should be titled “Online Ordering”, with
 - a paragraph stating “This page coming soon”

Step 3.

Check all your navigation hyperlinks to make sure they all work. This is how the instructor will be navigating through your site. The links must work from each page.

Step 4.

UPLOAD the entire csci120 directory (and all contents) to the web server.
